Pursue learning paths for in-demand roles

We have compiled learning paths for ten in-demand roles

- Data from LinkedIn’s Economic Graph and Microsoft Learn was used to understand key workforce trends, emerging skills gaps, in-demand technical and product skills, and the most in-demand jobs globally.

- This helped to identify ten in-demand jobs globally that are relevant in today’s economy and accessible to those seeking employment.

- The learning paths cover a broad range of skills, from entry-level digital literacy to advanced product-based skilling for technical roles. These Role based learning paths provide opportunities for people—wherever they are starting from—to reskill and upskill for in-demand roles.
What will this document help me do?

Map the learning paths to in-demand roles and track job seeker progress

While the job seeker resources are broadly available online, some people may benefit from additional support on their journey. This guide maps the learning pathways from entry level digital literacy to advanced product-based skilling for technical roles. Use it to navigate between LinkedIn Learning and Microsoft Learn content.

- Identify where a learner is on their journey. Then, based on their skills, interests, and the job role needs of the region, work together to choose a role well-suited to them. This guide will help identify what skills are needed for job seekers to advance to the next step towards an in-demand role.

- Use the arrows at the bottom of each page to help navigate next steps on the learning journey. See arrows and the color legend below.

Legend:
- Dark blue: Completed section of learning path
- Light blue: Current section on learning path
- Green: Up next on the learning path
- Gray: Future section
What will this document help me do?

Use this guide to identify where supplementary content is needed for learning paths or where it can complement existing nonprofit resources.

- Currently the content on LinkedIn Learning and Microsoft Learn is not available in all languages. This guide highlights the skills developed in each step so that nonprofits can customize the learning paths and supplement with their own, local language courses and content when they are not available from Microsoft or LinkedIn.

- As nonprofits transition from in-person to virtual learning environments, they can use this learning content as part of their virtual training offerings, to supplement training they already offer, or to help instructors build their skills and confidence.

- Additionally, it can help organizations as they build out their own learning course portfolios to show the progression of content and concepts needed to move job seekers from digital literacy to in-demand roles.
Where is your job seeker on their learning journey?

**Digital skills**
Job seekers can start here to learn the fundamentals of using digital technologies. They will learn how to effectively use devices, software, and the internet to collaborate with others and discover, use, and create information.

---

**Foundational skills**
Job seekers will start here if they are looking to build on digital skills and learn how to use a computer comfortably while improving learning and productivity. They will discover the essential soft-skills that help people interact effectively with others.

---

**Role based skills**
Once job seekers feel confident in their digital and foundational skills and decides what role they would like to pursue, they can access courses on LinkedIn Learning to gain the role based skills for in-demand jobs.

---

**Technical skills**
Job seekers can go deeper on technical skills for three of the roles with Microsoft Learn modules. They will gain valuable and in-demand skills on widely used technologies while preparing for a role based Microsoft Certification.
If you want to pursue a role as a...

Follow this learning journey based on your current skills

- Customer service specialist
- Digital marketing specialist
- Financial analyst
- Graphic designer
- IT support/help desk technician
- Project manager
- Sales development representative
- Data analyst
- IT administrator
- Software developer

- Digital skills
- Foundational skills
- Role based skills
- Technical skills

✔ Learn the basics of technology on Microsoft digital skills

✔ Gain foundational and role based skills for in-demand jobs and earn certificates of completion on LinkedIn Learning

✔ Advance technical skills on Microsoft Learn to prepare for certification
Get started on the learning paths
## Digital skills

### Skills

- Work with computers
- Access information online
- Communicate online
- Participate safely and responsibly online
- Create digital content
- Collaborate and manage content digitally

### Courses available

- Microsoft digital literacy course

Continue deeper, technical skilling on Microsoft Learn

Data analyst

IT administrator

Software developer

After completing the role based skills on LinkedIn Learning, job seekers can go deeper on technical skills for three roles with Microsoft Learn modules.
Data analyst

Role description

These skilled professionals are trained in mathematics, statistics, and computer science, which allow them to take on many different roles — such as operations analyst, financial analyst, and marketing analyst. With their unique skill sets, data analysts make sense of numbers so that organizations can make solid decisions about pricing, scheduling, operations, and much more.

IT administrator certification journey options

**Microsoft 365**

Microsoft 365 Teamwork Administrators configure, deploy, and manage Office 365 workloads that focus on efficient and effective collaboration, such as SharePoint (online, on-premises, and hybrid), OneDrive, and Microsoft Teams.

**Microsoft Azure**

Responsibilities for this role include implementing, managing, and monitoring identity, governance, storage, compute, and virtual networks in a cloud environment, plus provision, size, monitor, and adjust resources, when needed.

An Azure Administrator often serves as part of a larger team dedicated to implementing your organization’s cloud infrastructure.

**Security**

Azure Security Engineers implement security controls and threat protection; manage identity and access; and protect data, applications, and networks in cloud and hybrid environments as part of end-to-end infrastructure.
